

ALINA KABANETS

Product Engineer • React / TypeScript

aokabanets@gmail.com • +44 7506 991370 • [GitHub](#) | [LinkedIn](#)

Fully authorised to work in the UK • London - hybrid or remote

SUMMARY

Front-end-leaning product engineer who takes a feature from a business goal and a user problem through design and into shipped code, then checks whether it worked. Proven at two small startups where I owned design, front-end and product measurement at once. I work design-to-code every day - Figma MCP into Claude Code - so the gap this team is closing is the gap I live in.

SKILLS

Core: TypeScript, JavaScript, React, Next.js, React Native, HTML, CSS, Tailwind CSS, Sass, Redux, REST APIs

AI-native development: Figma MCP, Claude Code (multi-agent, role-based workflows), Cursor, MCP integrations

Product & measurement: event instrumentation, funnel definition, activation & retention metrics, KPI trees, feature success criteria, user research

Design: UX for agentic features, Figma, design systems, information architecture, user flows, interaction & micro-interaction design, RBAC / permissions modelling, accessibility

EXPERIENCE

Product Engineer - Deaku Apr 2026 - present • UK, remote

Five-person AI-native startup building a collaborative workspace for professional creators.

- Shipped 80+ features and fixes across the Next.js web app and React Native/Expo mobile app - designed the interaction, built it in production code, took it through release. Included the whole-app EULA acceptance gate with no-flash gated content, the cross-platform workspace-invitation flow with race-condition handling, and the mobile message-actions and reactions parity work.
- Owned the design stage of delivery: every ticket needing a UX or UI decision routed through me and was approved before engineering started. Redesigned and built the main dashboard after customers reported it as overwhelming, grounding the direction in usage-event data rather than opinion.
- Led the UX review of the AI feature set (assistant, agent, MCP integration) for non-technical users - 76 issues and recommendations on what the agent shows, asks and does; ~90% adopted.
- Defined the company's first measurement layer - a six-metric funnel from visit to free-to-paid, linked to revenue targets as a KPI tree - and the event instrumentation behind it, queryable through Claude Code in plain language. Introduced success criteria before design and measurement after launch as part of the build process.
- Worked agent-first: a ~10-agent Claude Code setup with distinct engineering roles, Figma MCP → Claude Code for screen capture, component documentation and ticket triage.

UX/UI Designer & Front-End Contributor - Vigorant Oct 2025 - Mar 2026 • US, remote

Multi-tenant, HIPAA-regulated healthcare SaaS. Contract.

- Designed and shipped two MVP products from scratch - patient portal and admin portal - in ~4 months, owning research, user flows, information architecture, design system and visual design through to production handoff.
- Delivered a standalone Forms product that secured the company's first paying client.
- Turned complex, high-stakes workflows - role-based access, subscription billing, multi-clinic navigation, patient onboarding - into usable interfaces; resolved ambiguous RBAC requirements with a single permissions matrix that engineers implemented without rework.
- Designed and built the production marketing site in React + Tailwind with Claude Code; contributed production front-end fixes alongside the lead developer; mentored a supporting designer.

Front-End Developer (Traineeship) - Mate Academy 2022 - 2025 • remote, part-time alongside relocation

- React / TypeScript / Redux applications and responsive interfaces from Figma; 100+ pull requests across 80+ repositories with weekly peer code review.

Photographer - self-employed 2014 - 2022 • Ukraine

- 250+ client projects, eight years of daily Photoshop and Lightroom - the training behind the eye for hierarchy, spacing and detail.

EDUCATION

BSc (Hons) Psychology, Taras Shevchenko National University of Kyiv, 2013 • Front-End Developer Certificate, Mate Academy, 2025 • Google UX Design Certificate, 2025
