ALINA KABANETS

Design Engineer

Designs it, builds it in React / TypeScript, measures what changed

SUMMARY

Design engineer who takes a feature from the user problem, through design, to shipped React/TypeScript, and then measures what changed. At Deaku, a five-person AI-native startup, I own the design stage and ship it myself across web and React Native: the interaction layer for the AI feature set, an internal analytics dashboard (in progress), and a brand landing page rebuilt from research to instrumentation. Before that I designed two healthcare products and their design system from scratch on a HIPAA-regulated platform. I trained as an engineer and added design so nothing gets lost in a handoff.

SKILLS

Design: product and interaction design, design systems and tokens, typography, layout and hierarchy, information architecture, user flows, UX for agentic features, user research, accessibility, Figma

AI-native workflow: Claude Code (multi-agent workflows), Cursor, Zed, Figma MCP, Linear MCP, agent-assisted prototyping

Engineering: TypeScript, React, Next.js, React Native / Expo, HTML, CSS, Tailwind, Storybook, Git / GitHub

Product and measurement: success criteria before design, event instrumentation, funnel, activation and retention metrics, KPI trees

EXPERIENCE

Product Engineer - Deaku

Apr 2026 - present | UK, remote

Five-person AI-native startup building a collaborative workspace for professional creators.

- Redesigned and rebuilt the brand landing page end to end - research, structure, copy, a Swiss-grid visual concept, the Next.js build and section-level instrumentation, with a fallback route for A/B tests.
- Designed and built the interaction layer for the AI feature set across web and React Native; led the UX review (76 recommendations, ~90% adopted).
- Own the design stage of delivery and ship it: 80+ tickets across web and React Native/Expo on iOS and Android, including the cross-platform workspace-invitation flow and the EULA gate.
- Redesigning the main dashboard after customers reported it as overwhelming - direction grounded in usage data and approved by the co-founder who built the original; build in progress.
- Defined the company's first measurement layer - a six-metric funnel from visit to paid as a KPI tree - used it to find where visitors were leaving, and introduced success criteria before design.

UX/UI Designer, Product Team - Vigorant

Oct 2025 - Mar 2026 | US, remote, contract

Borna Care: multi-tenant, HIPAA-regulated healthcare SaaS. Team of six.

- Designed and shipped two MVP products from scratch - patient portal and admin portal - in about four months, owning research, flows, information architecture and visual design.
- Built the design system in Figma from scratch: components, variants, tokens and interaction patterns.
- Delivered a standalone Forms product that secured the company's first paying client.
- Turned complex workflows - role-based access, subscription billing, multi-clinic navigation, patient onboarding - into clear interfaces; resolved ambiguous permission requirements with a single matrix engineers implemented without rework.

Front-End Developer, Traineeship - Mate Academy

2022 - 2025 | remote, part-time

- React / TypeScript / Redux applications and responsive interfaces from Figma; 100+ pull requests across 80+ repositories with weekly peer code review.

Photographer - self-employed

2014 - 2022 | Kyiv

- 250+ client projects; eight years of daily Photoshop and Lightroom behind the eye for typography, hierarchy and detail.

EDUCATION

BSc (Hons) Psychology, Taras Shevchenko University of Kyiv, 2013 | Front-End Developer Certificate, Mate Academy, 2025 | Google UX Design Certificate, 2025
